

Contents

Chapter 1	Introduction	3
PART I: Machine Learning and Optimization		
Chapter 2	Supervised machine learning methods in psychology: A practical introduction with annotated R code	20
Chapter 3	StatBreak: Identifying “Lucky” data points through genetic algorithms	84
Chapter 4	Autonomous human error learning: Using reinforcement learning models to identify weak points in human performance	132
PART II: Text as Data		
Chapter 5	Multilevel emotion transfer on YouTube: Disentangling the effects of emotional contagion and homophily on video audiences	169
Chapter 6	Inter- and intra-regional variability of intergroup bias predicts online hostility	199
Chapter 7	The Semantic Scale Network: An online tool to detect semantic overlap of psychological scales and prevent scale redundancies	263
PART III: Images as Data		
Chapter 8	Predicting psychological inferences based on women’s clothing: A database and computer vision model	320
Chapter 9	Using automated procedures to assess the experience of diverse speaker groups in online science communication	383
PART IV: Agent-Based Models, and Amusement		
Chapter 10	Would Chuck Norris win the Hunger Games? Simulating the result reliability of Battle Royale games through agent-based models	450
Chapter 11	Why aren’t they laughing? Determining the relative importance of joke and audience characteristics when trying to elicit amusement	488
Chapter 12	Discussion	550
